Computer Maxims for 2003

Ten Tips To Keep The Doctor Away

- #1 - Life is too short to install "hot, new" software upgrades.
- #2 - Turn it off, then turn it back on.
This cures 20% of your computer's problems
- #3 - Mice are SLOW.
Learn the keyboard and you will *triple* your speed.
- #4 - Cheap fixes are never cheap.
The right solution will save you money every time.
- #5 - I make a lot of money fixing: Norton software, Best Buy purchases and infected email attachments. Avoid all three.
- #6 - Buy a Dell. Buy McAfee VirusScan. Buy HP printers.
- #7 - If it's not backed up - it's lost.
- #8 - *Computers*: If they're not protected, they're infected.
Email attachments: If it's unexpected, it's infected
- #9 - A halfway-protected computer will crash.
- #10 - Don't swear at your computer.
